

Picosens GmbH

Founded in 2007, Picosens GmbH develops and patents visionary solutions in the area of sensor technology. Besides patent and license placement, Picosens brings innovations that it has developed into its own product portfolio and offers R & D services for highly technical customer projects. Currently, Picosens is developing products for core applications in security and access systems, building services, and materials analysis for a wide variety of industrial applications.

We are looking immediately for a Trainee in Software Development

Your tasks

- Expansion of an existing personnel time recording system
- Further development of the web interface user interface
- Firmware programming at the microcontroller level for the display and acquisition of information carriers (in the form of our Quantenkey)
- Addition of Linux-based software for controlling an alarm system
- Development of a Smartphone App to record offline times

What we want from you:

Enjoyment in programming and working in a highly dynamic, international environment. Interest in hardware-related systems and electronics.

- Good knowledge in the development of dynamic websites
- Experience with microcontrollers or embedded systems
- Basic electronics knowledge
- Experience in the following areas is an advantage but not a requirement: C, Web, mobile software development (Android, iOS)
- Responsible, structured and conscientious work ethic
- Hands on mentality
- Good command of English

Are you enthusiastic about new future-orientated visions and can realize ideas into concrete projects? Please send your detailed and complete job application documents to Ms Andrea Riemann, management assistant, at the following email address.
